## Disclaimer

The information in this manual is intended to be accurate and reliable. The company Messcomp Datentechnik GmbH does not assume any liability for any damages arising out of the use of the A/D converter module EXDUL-371 and this documentation, neither for direct nor indirect damages.

## Important Information:

This manual was made up for modules EXDUL-371E and EXDUL-371S. EXDUL-371E additionally provides an LCD display, all other functions are identical. For EXDUL-371S all commands and functions concerning the LCD display are not applicable.

## 1. Introduction

EXDUL-371E provides either eight single ended or four differential 12bit A/D input channels. You can adjust the input voltage ranges to be unipolar ( $0-5 \mathrm{~V}, 0-10 \mathrm{~V}$ ) as well as bipolar (+/-2.5 V, +/-5 V, +/-10 V).
The conversion process including configuration of the A/D components (selection of range and channel) is triggered by software commands. It is also possible to select output voltage ranges of both of the two 12bit D/A outputs either unipolar ( $0-5 \mathrm{~V}, 0-10 \mathrm{~V}$ ) or bipolar (+/-5 V, +/-10 V) via software.
Additionally the module provides three digital inputs and two digital outputs which are opto-isolated galvanically separated by high-quality optocouplers and equipped with additional protection diodes. One of the digital inputs can be used as a 16bit counter. All input optocouplers are fitted out with integrated schmitt trigger function. Special high power output optocouplers manage a maximum switching current of up to 150 mA . The programmable LCD display shows either digital I/O status information or programmable user-specific data.
An external power supply powers the module with the required operating voltage. The module provides a 24 pin screw terminal block for connecting the external power supply as well as the input and output optocouplers.
The compact chassis enables the module to be used as a portable device with a notebook. For mechanical or control engineering it can also be easily wall mounted or attached to DIN mounting rail.

## 2. Connection Terminals

### 2.1 Terminal Assignment of CN1

Vcc_EXT:
Connector for external power supply

## GND_EXT:

Ground connection when external power supply is used

## 3. System Components

### 3.1 Block Diagram EXDUL-371E

Figure 3.1 : Block Diagram EXDUL-371E

### 3.2 Block Diagram EXDUL-371S

Figure 3.2 : Block Diagram EXDUL-371S

### 3.3 A/D Inputs

8 inputs single-ended (se)
or 4 inputs differential (diff)
or combined se/diff software selectable
Resolution: 12 bit
Input voltage range:
unipolar: $0 . .5$ Volt, $0 . .10$ Volt
bipolar: +/-5 Volt, +/-10 Volt
Absolute Accuracy: typ 0.1 \% +/- 1 LSB
Input resistor: unipolar $42 \mathrm{k} \Omega$
bipolar $31 \mathrm{k} \Omega$
Over voltage protection: 20 V
Measuring cycle: max. 1 ms

### 3.4 D/A Outputs

2 outputs
Resolution: 12 bit
AA: typ 0.1 \% +/- 1 LSB
Output voltage range
unipolar: $0 . .5$ Volt, $0 . .10$ Volt bipolar: +/-2.5 Volt, +/-5 Volt, +/-10 Volt
Output current: max +/-5 mA

### 3.5 Optocoupler Inputs

3 channels, galvanically separated 1 of the channels progammable as a counter input Optocoupler with integrated schmitt trigger function Over voltage protection diodes Input voltage range
high $=10 . .30$ Volt
low $=0 . .3 \mathrm{Volt}$
Input frequency: max. 10 kHz

### 3.6 Optocoupler Outputs

2 channels, galvanically isolated High capacity optocouplers
Reverse polarity protection
Output current: max. 150 mA
Switching voltage: max. 50 V

### 3.7 Counter

1 programmable digital 16bit counter (allocated to the first optocoupler input)
counting frequency: max. 5 kHz

### 3.8 LCD Display

Matrix display with 2 lines and 16 columns displaying 16 characters each line
Programmable to display user specific data or I/O status

## 4. Initializing

Connecting to a computer is made quickly and easily in a Plug-and-Play manner via USB port. An external voltage source powers the module with the required operating voltage.

### 4.1 Connecting to a USB Port

The EXDUL-371E / EXDUL-371S provides a USB 2.0 interface and can be connected directly to the computer or a USB hub using the enclosed USB connecting cable. The connection supports hot-plug function, that means, it is possible to connect the module even while system is operating.

### 4.2 Power Supply via USB Port

If only the USB port is used to power the device (no other voltage source is connected) only certain basic functions are supported. It is possible to communicate via USB and write or read the optocoupler inputs or outputs, but all analog components and the LCD display are not placed at the disposal. The full scope of features of the EXDUL-371E /EXDUL-371S can only be used, if the module is powered by an external power supply.

### 4.3 External Power Supply

EXDUL-371E / EXDUL-371S firmware automatically detects when an external voltage source is connected. Applying a voltage between +18 V and +36 V across Vcc_EXT and GND_EXT (see figure terminal assignment) immediately causes the device to switch to "external" source. The power supply from the USB port will automatically be interrupted.

### 4.4 LCD display while starting up (EXDUL-371E only)

During initializing resp. starting the module the display shows the module name as an information message. After five seconds the module name will be replaced by either digital I/O status display or UserLCD display depending upon LCD display configuration.

#### Abstract

4.5 LCD display while operating (EXDUL-371E only)

Starting the module the display switches from info display to digital I/O status display or UserLCD display after five seconds depending on LCD display configuration. When I/O status display is selected, line1 indicates the active input states, line2 the output states. If the UserLCD modus is selected by calling the designated command before the last shutdown of the system, values from memory areas UserLCD1m and UserLCD2m are indicated instead of I/O status display. Data from both registers are indicated until new user data are written to the display UserLCD line1 and UserLCD line2. To avoid a „screen-burn" while in operation the display switches from I/O status or UserLCD display to info display for five seconds approximately every minute.

## 5. 8 A/D Inputs 12bit

The EXDUL-371 provides 8 single ended or 4 multiplexed 12bit A/D input channels with programmable input voltage range. When conversion is triggered, the computer will transfer configuration data for conversion (channel, range) in the form of two Bytes. After error corrections (such as an offset error) the module submits a measured value transformed in a voltage value in $\mu \mathrm{V}$ as a response.

### 5.1 Single ended Operation

In single ended operating mode max. 8 input channels are at your disposal. All input voltage ranges are measured against ground of the A/D components (see figure 5.1). Find a more detailed description of circuitry in chapter 10.4

Figure 5.1 A/D converter single ended

As mentioned before, one Byte for channel selection will be added to the command for measuring the voltage.
Please see table 5.1 to choose the proper channel for each value at single ended measurement.

| Channel Byte | Channel selection single ended |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | A G N D |
| $0_{\text {dez }}$ | + |  |  |  |  |  |  |  | - |
| 1 dez |  | + |  |  |  |  |  |  | - |
| 2 dez |  |  | + |  |  |  |  |  | - |
| 3 dez |  |  |  | + |  |  |  |  | - |
| 4dez |  |  |  |  | + |  |  |  | - |
| 5 dez |  |  |  |  |  | + |  |  | - |
| 6 dez |  |  |  |  |  |  | + |  | - |
| 7 dez |  |  |  |  |  |  |  | + | - |

Table 5.1 A/D converter single ended measurement
Example:For a single ended measurement of channel 3 the voltage source‘s positive pole has to be connected to AIN03 and the negative pole to AGND. The channel Byte of the command contains the value 2 dez.

### 5.2 Differential Operation

In differential operating mode max. 4 input channels are at your disposal. In differential mode each channel provides one positive and one negative input (see figure 5.2-1). Please note, all channels mustbe referenced to the ground (AGND) as well. Find a more detailed description of circuitry in chapter 10.5. Adifferentialmeasurementcan reduce commonly occurring noisy voltage on both of the signal lines and analog ground.

Figure 5.2-1
A/D converter differential measurement

Here too, the proper channel is selected likewise via the channel byte added to the command for measuring the voltage. You can find appropriate values in following table:

| Channel Byte | Differential channel selection |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | AGND |
| 8dez | + | - |  |  |  |  |  |  |  |
| $9_{\text {dez }}$ |  |  | + | - |  |  |  |  |  |
| 10dez |  |  |  |  | + | - |  |  |  |
| $11_{\text {dez }}$ |  |  |  |  |  |  | + | - |  |
| 12dez | - | + |  |  |  |  |  |  |  |
| 13dez |  |  | - | + |  |  |  |  |  |
| 14dez |  |  |  |  | - | + |  |  |  |
| $15_{\text {dez }}$ |  |  |  |  |  |  | - | + |  |

Table 5.2 A/D converter differential measurement

Serving as an example now the difference between two voltages shall be measured at the inputs AIN05 and AIN06. For this you have to connect the first voltage to AIN05 and the second one to AIN06 (see figure 5.2-2).
Caution: if you run a unipolar measurement please make sure, that the one voltage refers to the „+" in the table, whichever is the higher!
Now either the value $10_{\mathrm{dez}}$ or the value $14_{\mathrm{dez}}$ when measured bipolar (a negative differential voltage results) can be used as channel byte.

Figure 5.2-2

Caution: please take particular care to ensure, that the difference between the inputs is limited to the input voltage range at the highest.
An input voltage of +10 V at AIN05 and an output voltage of -10 V at AIN06 would result in a difference of +20 V which is not measurable.

### 5.3 Combination of single ended and differential Measurement

The measurement methods can also be varied channel by channel when required or even changed "on the fly" between each single measurement as shown in figure 5.3.

Figure 5.3

### 5.4 Input Voltage Range

To measure a voltage several input voltage ranges are at your disposal. So you can run the measurement unipolar ( $0-5 \mathrm{~V}, 0-10 \mathrm{~V}$ ) or bipolar (+/-5V, +/10 V ). Together with its measurement command to the module the computer will pass over a range byte to select the required voltage range.
Following compilation shows each single ranges and the corresponding byte values:

| Input voltage range |  |
| :---: | :---: |
| Byte value | unipolar |
| 0 | $0-10 \mathrm{~V}$ |
| 1 | $0-5 \mathrm{~V}$ |
|  | bipolar |
| 2 | $+/-10 \mathrm{~V}$ |
| 3 | $+/-5 \mathrm{~V}$ |

Table 5.4 A/D converter input voltage ranges

### 5.5 Adjustment of the A/D Inputs

The module is adjusted at an ambient temperature of about $20^{\circ} \mathrm{C}$ when finally tested by our production department. If there should be a considerable divergence in temperature at the end-user, the A/D component of the module can be adjusted to the ambient conditions subsequently. Please find the required software on the enclosed CD or visit our website.

## 6. 2 D/A Outputs 12bit

The EXDUL-371 provides two digital/analog converters. Both of them can operate with different output voltage ranges. You can use unipolar ( $0-5 \mathrm{~V}$, $0-10 \mathrm{~V}$ ) as well as bipolar ranges (+/-2.5V, +/-5V, +/-10V).

### 6.1 Output Voltage Range

Both of the D/A converter provide a variable output voltage range. You can choose between unipolar or bipolar ranges by a configuration byte (range byte), which is added to the conversion command triggered by the computer to the module. This selection can be changed "on-the-fly" , i.e. you can select the range bipolar $+/-10 \mathrm{~V}$ for the one voltage issue (for example -7 V ) and the range bipolar $+/-5 \mathrm{~V}$ for a subsequent issue (for example -3 V ), to achieve a higher resolution.
Please see appropriate allocation of range byte value and output voltage range in following table:

| Output voltage range |  |
| :---: | :---: |
| range byte | unipolar |
| 0 | $0-10 \mathrm{~V}$ |
| 1 | $0-5 \mathrm{~V}$ |
|  | bipolar |
| 2 | $+/-10 \mathrm{~V}$ |
| 3 | $+/-5 \mathrm{~V}$ |
| 4 | $+/-2.5 \mathrm{~V}$ |

Table 6.1 D/A converter output voltage ranges

### 6.2 Adjustment of the D/A Outputs

The module is adjusted at an ambient temperature of about $20^{\circ} \mathrm{C}$ when finally tested by our production department. If there should be a considerable divergence in temperature at the end-user, the D/A component of the module can be adjusted to the ambient conditions subsequently. Please find the required software on the enclosed CD or visit our website.

## 7. Installing the Windows ${ }^{\circledR}$ Drivers

When you connect the USB module EXDUL-371E / EXDUL-371S to your PC for the first time, Windows ${ }^{\circledR}$ automatically will detect a new hardware and will search for a suitable driver.

To install the driver indicate the directory and setup file called „wascoxmfe_v0x.inf" to the windows hardware wizard (fill in the version number of the INF file instead of $x$, for example wascoxmfe_v06.inf)

Having updated the driver database the hardware wizard will inform you of the successful driver installation.

The Windows ${ }^{\circledR}$ Device Manager will now show your USB module EXDUL371E / EXDUL-371S as a "Wasco-USB-Kommunikationsport COMx" in its directory connections tree (COM/LTP). All Windows ${ }^{\circledR}$ software can access to the virtual interface as if it were a real COM port.

## 8. Programming under Windows ${ }^{\circledR}$

### 8.1 Overwiew

After successful installation the USB module EXDUL-371E / EXDUL371S is shown as a "Wasco-USB-Kommunikationsport COMx" in your Windows ${ }^{\circledR}$ Device Manager. This is a CDC device (Communications Device Class), that is adressed via a virtual COM port.
This virtual COM port operates like a normal COM interface and can be accessed by default Windows ${ }^{\circledR}$ drivers, it is not necessary to install any additional drivers.

### 8.2 Communication with EXDUL-371

Data is exchanged by transmitting and receiving a block of 23 bytes via the virtual COM interface.

Every valid transmission string will be replied by a defined result or confirmation string.

The last result or confirmation string has to be read before transmitting a new string.

Figure 8.2 Communications model

### 8.3 Windows ${ }^{\circledR}$ Functions for Programming

You can program EXDUL-371E / EXDUL-371S either via WIN32 API functions or very conveniently via an already existing serial port object in a programming language. You can find sample programs in your installation directory on your computer after having installed the software.

Windows ${ }^{\circledR}$ functions for programming:

- CreateFile
- GetCommState
- SetCommState
- WriteFile
- ReadFile
- DCB structure (describes the control parameters of the device)

### 8.4 Register HW Identification and Serial Number

| Byte | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| HW identifier | E | X | D | U | L | - | 3 | 7 | 1 | v | 1 |  | 0 | 2 |  |  |
|  | $45_{\text {tex }}$ | 58 | 44 ${ }_{\text {nex }}$ | $55_{\text {max }}$ | 4C ${ }_{\text {nax }}$ | 2D ${ }_{\text {nox }}$ | 33 ${ }_{\text {nxx }}$ | $37_{\text {tex }}$ | $31_{\text {nox }}$ | 76 | $31_{\text {trx }}$ | $3 \mathrm{E}_{\text {tax }}$ | $30_{\text {nox }}$ | $32{ }_{\text {rax }}$ | $20_{\text {nex }}$ | $20_{\text {nex }}$ |
| S/N | 1 | 0 | 4 | 4 | 0 | 2 | 6 |  |  |  |  |  |  |  |  |  |
|  | $01_{\text {tax }}$ | $00_{\text {nex }}$ | 04 ${ }_{\text {nex }}$ | 04 ${ }_{\text {nex }}$ | $00_{\text {nxx }}$ | 02 ${ }_{\text {nex }}$ | 06 ${ }_{\text {rex }}$ | FF ${ }_{\text {nax }}$ | $\mathrm{FF}_{\text {bax }}$ | $\mathrm{FF}_{\text {nax }}$ | $\mathrm{FF}_{\text {bax }}$ | FF ${ }_{\text {tax }}$ | $\mathrm{FF}_{\text {nox }}$ | FF ${ }_{\text {trax }}$ | $\mathrm{FF}_{\text {nox }}$ | $\mathrm{FF}_{\text {nex }}$ |

Table 8.4 Register HW identification and serial number
The module name as well as the firmware version is stored in the HW identification register and can be used for verifying the product identity. Hardware identification ends with a blank.

The table above serves as an example for module EXDUL-371 with firmware version 1.02. The line HW identification shows each Hex value and the corresponding ASCII character.

Register Serial Number can only be read by the user. The serial number in the table above serves as a format example. The line $\mathrm{S} / \mathrm{N}$ displays each Hex value and the corresponding ASCII character for serial number 1044026.

### 8.5 Memory areas UserA, UserB, UserLCD1m* and UserLCD2m*

| Byte | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

|  | $20_{\text {nex }}$ | $20_{\text {nxx }}$ | $20_{\text {nox }}$ | $20_{\text {nox }}$ | $2 \mathrm{n}_{\text {nex }}$ | $20_{\text {nox }}$ | $20_{\text {nex }}$ | $20_{\text {nax }}$ | $20_{\text {nxx }}$ | $20_{\text {nox }}$ | $20^{\text {nex }}$ | $20_{\text {nex }}$ | $20_{\text {nax }}$ | $20_{\text {nex }}$ | $20_{\text {nax }}$ | $20_{\text {nex }}$ |
| UserB |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  | $20_{\text {nex }}$ | $20_{\text {nxx }}$ | $20_{\text {nox }}$ | $20_{\text {nex }}$ | $20_{\text {nex }}$ | $20_{\text {nex }}$ | $20^{\text {nxx }}$ | $20_{\text {nex }}$ | $20_{\text {nxx }}$ | $20_{\text {nox }}$ | $20^{\text {nex }}$ | $20_{\text {nex }}$ | $20_{\text {nex }}$ | $20_{\text {nex }}$ | $20_{\text {nex }}$ | $20_{\text {mex }}$ |
| UserLCD1m* |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  | $20_{\text {nex }}$ | $20_{\text {nxx }}$ | $20_{\text {nox }}$ | $20_{\text {nox }}$ | $2 \mathrm{n}_{\text {nex }}$ | $20_{\text {nox }}$ | $20_{\text {nex }}$ | $20_{\text {nax }}$ | $20_{\text {nxx }}$ | 20nax | $20_{\text {nex }}$ | $20_{\text {nex }}$ | $20_{\text {nax }}$ | $20_{\text {nax }}$ | $20_{\text {nax }}$ | 20 |
| UserLCD2m* |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  | 20nex | $20_{\text {nxx }}$ | $20_{\text {nox }}$ | $20_{\text {nox }}$ | $20_{\text {nex }}$ | $20_{\text {nax }}$ | $20_{\text {nox }}$ | $20_{\text {nax }}$ | $20_{\text {nxx }}$ | $20_{\text {nax }}$ | $20_{\text {nex }}$ | $20_{\text {nex }}$ | $20_{\text {nax }}$ | $20_{\text {nex }}$ | $20_{\text {nax }}$ | 20 |

Table 8.5 Memory areas
In each register UserA, UserB, UserLCD1m* and UserLCD2m* 16 digits (16 Byte) are at your disposal for your own use. Data remains stored when you switch off, registers can be set back to factory settings (delivery status) by a default reset. In delivery status in all of the four user memory areas each digit is set to the Hex value 20 corresponding to a blank in ASCII code. The table above shows each Hex value and the corresponding ASCII character.

[^0]If you start the module in UserLCD mode activated, the EXDUL-371E displays data from memory register UserLCD1m* and UserLCD2m* untill new user data is written to the LCD display in lines UserLCD-line1 and UserLCD-line2

### 8.6 Display Register UserLCD-line1*, UserLCD-line2* and LCD Contrast*

If UserLCD mode is activated you can write to both of the UserLCD-line1 and UserLCD-line2 any 16 characters. Once entered this will be displayed instead of data from UserLCD1m* and UserLCD2m*. Data from UserLCDline1 and UserLCD-line2 will not be stored at switch off. You can adjust LCD display contrast in register LCD contrast. This adjustment remains stored at switch off.

### 8.7 Command and Data Format

Data is exchanged by transmitting and receiving strings. Every transmitting or receiving string consists of 23 bytes (1 byte per character). Each string comprises of four command bytes, 16 Data bytes and three error bytes.
Configuration or output commands are confirmed by returning the relevant string. Reading commands are replied by a string with an operation code and the read value.

### 8.8 Index of Commands

| Hex code | Description |
| :---: | :---: |
| OC 000000 | Write UserA |
| OC 000001 | Read UserA |
| OC 000002 | Write UserB |
| 0C 000003 | Read UserB |
| 0C 000307 | Write UserLCD1m |
| 0C 000309 | Read UserLCD1m |
| 0C 000308 | Write UserLCD2m |
| OC 00030 A | Read UserLCD2m |
| OC 000300 | Write UserLCD-line1 |
| OC 000302 | Read UserLCD-line1 |
| 0C 000301 | Write UserLCD-line2 |
| 0C 000303 | Read UserLCD-line2 |
| OC 000304 | UserLCD mode enable / disable |
| 0C 000305 | Read UserLCD mode status |
| 0C 0003 0B | Write LCD contrast |
| OC 0003 0C | Read LCD contrast |
| OC 000401 | Read HW identification |
| 0C 000501 | Read serial number |
| 08000101 | Read optocoupler input port |
| 08000000 | Write optocoupler output port |
| 08000001 | Read optocoupler output port (status request) |

*: Applicable for EXDUL-371E only!

| 09000000 | Start counter |
| :--- | :--- |
| 09000001 | Stop counter |
| 09000002 | Read counter status |
| 09000003 | Read counter |

### 8.9 Command Composition

### 8.9.1 Writing in area UserA and UserB

Example: type character string EXDUL-371 in register UserA and UserB

| Byte | Transmission | Response | Description |
| :---: | :---: | :---: | :---: |
| 0 | OC | 0C | Command code 1st Byte |
| 1 | 00 | 00 | Command code 2nd Byte |
| 2 | 00 | 00 | Command code 3rd Byte |
| 3 | $\begin{aligned} & 00 \text { (UserA) } \\ & 02 \text { (UserB) } \end{aligned}$ | $\begin{aligned} & 00 \text { (UserA) } \\ & 02 \text { (UserB) } \end{aligned}$ | Command code 4th Byte |
| 4 | 45 | 45 | Data 1st character Easci |
| 5 | 58 | 58 | Data 2nd character $\mathrm{X}_{\text {asci }}$ |
| 6 | 44 | 44 | Data 3rd character Dasci |
| 7 | 55 | 55 | Data 4th character Uasci |
| 8 | 4 C | 4 C | Data 5th character Lasci |
| 9 | 2D | 2D | Data 6th character -asci |
| 10 | 33 | 33 | Data 7th character 3asci |
| 11 | 37 | 37 | Data 8th character 7 asci |
| 12 | 31 | 31 | Data 9th character 1 asci |
| 13 | 20 | 20 | Data 10th character [blank]asci |
| 14 | 20 | 20 | Data 11th character [blank]asci |
| 15 | 20 | 20 | Data 12th character [blank]asci |
| 16 | 20 | 20 | Data 13th character [blank]asci |
| 17 | 20 | 20 | Data 14th character [blank]asci |
| 18 | 20 | 20 | Data 15th character [blank]asci |
| 19 | 20 | 20 | Data 16th character [blank]asci |
| 20... 22 |  |  | kept for error code / error detection |

### 8.9.2 Reading from areas UserA and UserB

Example: read character string EXDUL-371 from register UserA and UserB

| Byte | Transmission | Response | Description |
| :---: | :---: | :---: | :---: |
| 0 | OC | OC | Command code 1st Byte |
| 1 | 00 | 00 | Command code 2nd Byte |
| 2 | 00 | 00 | Command code 3rd Byte |
| 3 | 01 (UserA) <br> 03 (UserB) | 01 (UserA) <br> 03 (UserB) | Command code 4th Byte |
| 4 | xx | 45 | Data 1st character Easci |
| 5 | xx | 58 | Data 2nd character X ${ }_{\text {asci }}$ |
| 6 | xx | 44 | Data 3rd character Dasci |
| 7 | xx | 55 | Data 4th character Uasci |
| 8 | xx | 4C | Data 5th character Lasci |
| 9 | xx | 2D | Data 6th character -asci |
| 10 | 33 | 33 | Data 7th character $3_{\text {asci }}$ |
| 11 | 37 | 37 | Data 8th character 7 asci |
| 12 | 31 | 31 | Data 9th character 1 asci |
| 13 | xx | 20 | Data 10th character [blank]asci |
| 14 | xx | 20 | Data 11th character [blank]asci |
| 15 | xx | 20 | Data 12th character [blank]asci |
| 16 | xx | 20 | Data 13th character [blank]asci |
| 17 | xx | 20 | Data 14th character [blank]asci |
| 18 | xx | 20 | Data 15th character [blank]asci |
| 19 | xx | 20 | Data 16th character [blank]asci |
| 20... 22 |  |  | kept for error code / error detection |

### 8.9.3 Writing in UserLCD1m* and UserLCD2m*

Example: type character string EXDUL-371 in Register UserLCD1m* and UserLCD2m*

| Byte | Transmission | Response | Description |
| :---: | :---: | :---: | :--- |
| 0 | $0 C$ | $0 C$ | Command code 1st Byte |
| 1 | 00 | 00 | Command code 2nd Byte |
| 2 | 03 | 03 | Command code 3rd Byte |
| 3 | 07 (UserLCD1m) <br> 08 (UserLCD2m) | 07 (UserLCD1m) <br> 08 (UserLCD2m) | Command code 4th Byte |
| 4 | 45 | 45 | Data 1st character Easci |
| 5 | 58 | 58 | Data 2nd character Xasci |
| 6 | 44 | 44 | Data 3rd character Dasci |
| 7 | 55 | 55 | Data 4th character Uasci |
| 8 | $4 C$ | 4 C | Data 5th character Lasci |
| 9 | $2 D$ | $2 D$ | Data 6th character -asci |
| 10 | 33 | 33 | Data 7th character 3asci |
| 11 | 37 | 37 | Data 8th character 7asci |
| 12 | 31 | 31 | Data 9th character 1asci |
| 13 | 20 | 20 | Data 10th character [blank]asci |
| 14 | 20 | 20 | Data 11th character [blank]asci |
| 15 | 20 | 20 | Data 12th character [blank]asci |
| 16 | 20 | 20 | Data 13th character [blank]asci |
| 17 | 20 | 20 | Data 14th character [blank]asci |
| 18 | 20 | 20 | Data 15th character [blank]asci |
| 19 | 20 |  | Data 16th character [blank]asci |
| $20 \ldots 22$ |  | kept for error code / error detection |  |
| 20 |  |  |  |

*: applicable for EXDUL-371E only

### 8.9.4 Reading from UserLCD1m* and UserLCD2m*

Example: read character string EXDUL-371 from register UserLCD1m* and UserLCD2m*

| Byte | Transmission | Response | Description |
| :---: | :---: | :---: | :---: |
| 0 | OC | OC | Command code 1st Byte |
| 1 | 00 | 00 | Command code 2nd Byte |
| 2 | 03 | 03 | Command code 3rd Byte |
| 3 | 09 (UserLCD1m) <br> 0A (UserLCD2m) | 09 (UserLCD1m) <br> 0A (UserLCD2m) | Command code 4th Byte |
| 4 | xx | 45 | Data 1st character Easci |
| 5 | xx | 58 | Data 2nd character $\mathrm{X}_{\text {asci }}$ |
| 6 | xx | 44 | Data 3rd character Dasci |
| 7 | XX | 55 | Data 4th character $U_{\text {asci }}$ |
| 8 | XX | 4C | Data 5th character Lasci |
| 9 | xx | 2D | Data 6th character -asci |
| 10 | XX | 33 | Data 7th character 3asci |
| 11 | xx | 37 | Data 8th character 7 asci |
| 12 | XX | 31 | Data 9 th character 1 asci |
| 13 | xx | 20 | Data 10th character [blank]asci |
| 14 | xX | 20 | Data 11th character [blank]asci |
| 15 | XX | 20 | Data 12th character [blank]asci |
| 16 | xx | 20 | Data 13th character [blank] ${ }_{\text {asci }}$ |
| 17 | xX | 20 | Data 14th character [blank]asci |
| 18 | XX | 20 | Data 15th character [blank]asci |
| 19 | XX | 20 | Data 16th character [blank]asci |
| 20... 22 |  |  | kept for error code / error detection |

*: applicable for EXDUL-371E only

### 8.9.5 Writing in UserLCD1* and UserLCD2*

Example: type character string EXDUL-371 in UserLCD1* resp. UserLCD2*

| Byte | Transmission | Response | Description |
| :---: | :---: | :---: | :---: |
| 0 | OC | OC | Command code 1st Byte |
| 1 | 00 | 00 | Command code 2nd Byte |
| 2 | 03 | 03 | Command code 3rd Byte |
| 3 | $\begin{aligned} & 00 \text { (UserLCD1) } \\ & 01 \text { (UserLCD2) } \end{aligned}$ | $\begin{aligned} & 00 \text { (UserLCD1) } \\ & 01 \text { (UserLCD2) } \end{aligned}$ | Command code 4th Byte |
| 4 | 45 | 45 | Data 1st character Easci |
| 5 | 58 | 58 | Data 2nd character $\mathrm{X}_{\text {asci }}$ |
| 6 | 44 | 44 | Data 3rd character Dasci |
| 7 | 55 | 55 | Data 4th character $\mathrm{U}_{\text {asci }}$ |
| 8 | 4C | 4C | Data 5th character Lasci |
| 9 | 2D | 2D | Data 6th character -asci |
| 10 | 35 | 33 | Data 7 th character $3_{\text {asci }}$ |
| 11 | 31 | 37 | Data 8th character 7 asci |
| 12 | 36 | 31 | Data 9th character 1 asci |
| 13 | 20 | 20 | Data 10th character [blank]asci |
| 14 | 20 | 20 | Data 11th character [blank]asci |
| 15 | 20 | 20 | Data 12th character [blank]asci |
| 16 | 20 | 20 | Data 13th character [blank]asci |
| 17 | 20 | 20 | Data 14th character [blank]asci |
| 18 | 20 | 20 | Data 15th character [blank]asci |
| 19 | 20 | 20 | Data 16th character [blank]asci |
| 20... 22 |  |  | kept for error code / error detection |

[^1]
### 8.9.6 Reading from UserLCD1* and UserLCD2*

Example: read character string EXDUL-371 from UserLCD1* resp. UserLCD2*

| Byte | Transmission | Response | Description |
| :---: | :---: | :---: | :---: |
| 0 | OC | OC | Command code 1st Byte |
| 1 | 00 | 00 | Command code 2nd Byte |
| 2 | 03 | 03 | Command code 3rd Byte |
| 3 | 02 (UserLCD1) <br> 03 (UserLCD2) | 02 (UserLCD1) <br> 03 (UserLCD2) | Command code 4th Byte |
| 4 | xX | 45 | Data 1st character $\mathrm{E}_{\text {asci }}$ |
| 5 | xx | 58 | Data 2nd character Xasci |
| 6 | XX | 44 | Data 3rd character Dasci |
| 7 | XX | 55 | Data 4th character Uasci |
| 8 | XX | 4C | Data 5th character Lasci |
| 9 | xx | 2D | Data 6th character -asci |
| 10 | xx | 33 | Data 7th character $3_{\text {asci }}$ |
| 11 | xx | 37 | Data 8th character 7 asci |
| 12 | xx | 31 | Data 9th character 1asci |
| 13 | XX | 20 | Data 10th character [blank]asci |
| 14 | xx | 20 | Data 11th character [blank]asci |
| 15 | XX | 20 | Data 12th character [blank]asci |
| 16 | xx | 20 | Data 13th character [blank]asci |
| 17 | xx | 20 | Data 14th character [blank]asci |
| 18 | XX | 20 | Data 15th character [blank]asci |
| 19 | XX | 20 | Data 16th character [blank] asci |
| 20... 22 |  |  | kept for error code / error detection |

*: applicable for EXDUL-371E only

### 8.9.7 Writing UserLCD mode

## Example: enable UserLCD mode

| Byte | Transmission | Response | Description |
| :---: | :---: | :---: | :--- |
| 0 | $0 C$ | $0 C$ | Command code 1st Byte |
| 1 | 00 | 00 | Command code 2nd Byte |
| 2 | 03 | 03 | Command code 3rd Byte |
| 3 | 04 | 04 | Command code 4th Byte |
| 4 | 01 | 01 | 01 = enable / 00 = disable |
| $5 \ldots 19$ |  |  | reserved, without relevance for this command |
| $20 \ldots 22$ |  |  | kept for error code / error detection |

### 8.9.8 Reading UserLCD mode

Example: UserLCD mode is enabled

| Byte | Transmission | Response | Description |
| :---: | :---: | :---: | :---: |
| 0 | OC | OC | Command code 1st Byte |
| 1 | 00 | 00 | Command code 2nd Byte |
| 2 | 03 | 03 | Command code 3rd Byte |
| 3 | 05 | 05 | Command code 4th Byte |
| 4 | XX | 01 | 01 = enable $/ 00=$ disable |
| 5... 19 |  |  | reserved, without relevance for this command |
| 20... 22 |  |  | kept for error code / error detection |

[^2]
### 8.9.9 Reading of HW identification

Example: reading of hardware identifier EXDUL-371V1.02

| Byte | Transmission | Response | Description |
| :---: | :---: | :---: | :---: |
| 0 | OC | OC | Command code 1st Byte |
| 1 | 00 | 00 | Command code 2nd Byte |
| 2 | 04 | 04 | Command code 3rd Byte |
| 3 | 01 | 01 | Command code 4th Byte |
| 4 | XX | 45 | Data 1st character $\mathrm{E}_{\text {asci }}$ |
| 5 | xX | 58 | Data 2nd character Xasci |
| 6 | xX | 44 | Data 3rd character Dasci |
| 7 | xx | 55 | Data 4th character $\mathrm{U}_{\text {asci }}$ |
| 8 | xx | 4C | Data 5th character Lasci |
| 9 | xx | 2D | Data 6th character -asci |
| 10 | xx | 33 | Data 7th character 3asci |
| 11 | XX | 37 | Data 8 th character 7 asci |
| 12 | xx | 31 | Data 9th character $1_{\text {asci }}$ |
| 13 | xx | 76 | Data 10th character vasci |
| 14 | xx | 31 | Data 11th character $1_{\text {asci }}$ |
| 15 | xx | 2E | Data 12th character .asci |
| 16 | xx | 30 | Data 13th character $0_{\text {asci }}$ |
| 17 | XX | 32 | Data 14th character 2asci |
| 18 | xX | 20 | Data 15th character [blank] ${ }_{\text {asci }}$ |
| 19 | XX | 20 | Data 16th character [blank]asci |
| 20... 22 |  |  | kept for error code / error detection |

### 8.9.10 Reading of Serial Number

Example: reading of serial number 1044026

| Byte | Transmission | Response | Description |
| :---: | :---: | :---: | :--- |
| 0 | $0 C$ | $0 C$ | Command code 1st Byte |
| 1 | 00 | 00 | Command code 2nd Byte |
| 2 | 05 | 05 | Command code 3rd Byte |
| 3 | 01 | 01 | Command code 4th Byte |
| 4 | xx | 01 | Data 1st character $1_{\text {dez }}$ |
| 5 | xx | 00 | Data 2nd character $0_{\text {dez }}$ |
| 6 | xx | 04 | Data 3rd character 4dez |
| 7 | xx | 04 | Data 4th character 4dez |
| 8 | xx | 00 | Data 5th character 0dez |
| 9 | xx | 02 | Data 6th character 2dez |
| 10 | xx | 06 | Data 7th character 6dez |
| $11 \ldots 19$ | xx | 20 | reserved, without relevance for this command |
| $20 \ldots 22$ |  |  | kept for error code / error detection |

### 8.9.11 Reading optocoupler input port

Example: Reading inputs from optocoupler input port. The voltage thresholds for an input to be considered a logic low and logic high are shown below. This example assumes that the correct voltages has been applied to each input optocoupler pin. ( $0=$ low $=0 \ldots 3 \mathrm{~V} ; 1$ $=$ high $=10 . .30 \mathrm{~V}$ )

| Input channel | INO2 | INO1 | IN00 |
| :--- | :---: | :---: | :---: |
| Terminal screw | 21 | 19 | 17 |
| Input level | 0 | 1 | 1 |
| Display* | A | E | E |

| Byte | Transmission | Response | Description |
| :---: | :---: | :---: | :--- |
| 0 | 08 | 08 | Command code 1st Byte |
| 1 | 00 | 00 | Command code 2nd Byte |
| 2 | 01 | 01 | Command code 3rd Byte |
| 3 | 01 | 01 | Command code 4th Byte |
| 4 | xx | 03 | read value (00...07) |
| $5 \ldots 19$ |  | reserved, without relevance for this command |  |
| $20 \ldots 22$ |  | kept for error code / error detection |  |

[^3]
### 8.9.12 Writing to optocoupler output port

Example: enable optocoupler OUT01, ( 1 = optocoupler connected, $0=$ optocoupler not connected)

| Output channel | OUT01 | OUT00 |
| :--- | :---: | :---: |
| Terminal screw | 15 | 13 |
| Connection state | 1 | 0 |
| Display* | E | A |

| Byte | Transmission | Response | Description |
| :---: | :---: | :---: | :--- |
| 0 | 08 | 08 | Command code 1st Byte |
| 1 | 00 | 00 | Command code 2nd Byte |
| 2 | 00 | 00 | Command code 3rd Byte |
| 3 | 00 | 00 | Command code 4th Byte |
| 4 | $5 C$ | 02 | Transfer value (00...03) |
| $5 \ldots 19$ |  |  | reserved, without relevance for this command |
| $20 \ldots 22$ |  | kept for error code / error detection |  |

*: applicable for EXDUL-371E only

### 8.9.13 Readback optocoupler output port (status request)

Example: enable optocoupler at channel OUT01, ( 1 = optocoupler connected, $0=$ optocoupler not connected)

| Output channel | OUT01 | OUT00 |
| :--- | :---: | :---: |
| Terminal screw | 15 | 13 |
| Connection state | 1 | 0 |
| Display* | E | A |

| Byte | Transmission | Response | Description |
| :---: | :---: | :---: | :---: |
| 0 | 08 | 08 | Command code 1st Byte |
| 1 | 00 | 00 | Command code 2nd Byte |
| 2 | 00 | 00 | Command code 3rd Byte |
| 3 | 01 | 01 | Command code 4th Byte |
| 4 | xx | 02 | Transfer value (00...03) |
| 5... 19 |  |  | reserved, without relevance for this command |
| 20... 22 |  |  | kept for error code / error detection |

*: applicable for EXDUL-371E only

### 8.9.14 Start counter

Every start command will reset the counter to 0 . The counter then begins counting upwards, ranging from 0... 65535 .

| Byte | Transmission | Response | Description |  |
| :---: | :---: | :---: | :--- | :---: |
| 0 | 09 | 09 | Command code 1st Byte |  |
| 1 | 00 | 00 | Command code 2nd Byte |  |
| 2 | 00 | 00 | Command code 3rd Byte |  |
| 3 | 00 | 00 | Command code 4th Byte |  |
| $4 \ldots 19$ |  |  | reserved, without relevance for this command |  |
| $20 \ldots 22$ |  | kept for error code / error detection |  |  |

### 8.9.15 Readback started counter (status request)

Example: counter started

| Byte | Transmission | Response | Description |  |
| :---: | :---: | :---: | :--- | :---: |
| 0 | 09 | 09 | Command code 1st Byte |  |
| 1 | 00 | 00 | Command code 2nd Byte |  |
| 2 | 00 | 00 | Command code 3rd Byte |  |
| 3 | 02 | 02 | Command code 4th Byte |  |
| 4 | xx | 01 | $01=$ counter started $(00$ = counter stopped) |  |
| $5 \ldots 19$ |  |  | reserved, without relevance for this command |  |
| $20 \ldots 22$ |  | kept for error code / error detection |  |  |

### 8.9.16 Stop counter

| Byte | Transmission | Response | Description |  |
| :---: | :---: | :---: | :--- | :---: |
| 0 | 09 | 09 | Command code 1st Byte |  |
| 1 | 00 | 00 | Command code 2nd Byte |  |
| 2 | 00 | 00 | Command code 3rd Byte |  |
| 3 | 01 | 01 | Command code 4th Byte |  |
| $4 \ldots 19$ |  |  |  |  |
| $20 \ldots 22$ |  | reserved, without relevance for this command |  |  |

### 8.9.17 Read counted value

Example 1: Read counted value 2047 (without overflow)

| Byte | Transmission | Response | Description |
| :---: | :---: | :---: | :--- |
| 0 | 09 | 09 | Command code 1st Byte |
| 1 | 00 | 00 | Command code 2nd Byte |
| 2 | 00 | 00 | Command code 3rd Byte |
| 3 | 03 | 03 | Command code 4th Byte |
| 4 | xx | 00 | Overflow flag (set when counting range exceeded) |
| 5 | xx | 07 | reading value (Highbyte $-00 \ldots$ FF) |
| 6 | xx | FF | reading value (Lowbyte $-00 \ldots$ FF) |
| $7 \ldots 19$ |  |  | reserved, without relevance for this command |
| $20 \ldots 22$ |  |  | kept for error code / error detection |

Counted value = reading value High-Byte x 256 + reading value Low-Byte

Example 2: Read counted value 2047 counting range exceeded (with overflow)

| Byte | Transmission | Response | Description |
| :---: | :---: | :---: | :--- |
|  |  |  |  |
| 4 | $x x$ | 01 | Overflow flag (set when counting range exceeded) |
| 5 | $x x$ | 07 | reading value (Highbyte $-00 \ldots$ FF) |
| 6 | $x x$ | FF | reading value (Lowbyte $-00 \ldots$ FF) |

Counted value $=$ reading value High-Byte $\times 256$ + reading value Low-Byte

### 8.9.18 Write LCD contrast value*

This command adjusts display contrast. Values are valid from 0 up to 4095 , the display contrast will reduce the more the value increases. Comfortable display contrast will be achieved with values ranging from 800 up to 1800.

Example: Display contrast value 800

| Byte | Transmission | Response | Description |
| :---: | :---: | :---: | :--- |
| 0 | $0 C$ | $0 C$ | Command code 1st Byte |
| 1 | 00 | 00 | Command code 2nd Byte |
| 2 | 03 | 03 | Command code 3rd Byte |
| 3 | $0 B$ | $0 B$ | Command code 4th Byte |
| 4 | 03 | 03 | reading value (Highbyte - 00...0F) |
| 5 | 20 | 20 | reading value (Lowbyte - 00...FF) |
| $6 \ldots 19$ |  |  | reserved, without relevance for this command |
| $20 \ldots 22$ |  |  | kept for error code / error detection |

Contrast value = transfer value High-Byte x $256+$ transfer value Low-Byte (03 $20=800$ )

Example: Display contrast value 1800

| Byte | Transmission | Response | Description |
| :---: | :---: | :---: | :--- |
| 4 | 07 | 07 | Transfer value (High-Byte -00...0F) |
| 5 | 08 | 08 | Transfer value (Low-Byte $-00 \ldots$ FF) |

Contrast value = transfer value High-Byte x $256+$ transfer value Low-Byte (07 08 = 1800)
*: applicable for EXDUL-371E only

### 8.9.19 Read LCD contrast value*

Example: Display contrast value 800

| Byte | Transmission | Response | Description |
| :---: | :---: | :---: | :--- |
| 0 | OC | OC | Command code 1st Byte |
| 1 | 00 | 00 | Command code 2nd Byte |
| 2 | 03 | 03 | Command code 3rd Byte |
| 3 | $0 C$ | $0 C$ | Command code 4th Byte |
| 4 | xx | 03 | reading value (Highbyte $-00 \ldots$...OF) |
| 5 | xx | 20 | reading value (Lowbyte $-00 \ldots$ FF) |
| $6 \ldots 19$ |  |  | reserved, without relevance for this command |
| $20 \ldots 22$ |  |  | kept for error code / error detection |

Contrast value $=$ transfer value High-Byte x $256+$ transfer value Low-Byte $(0320=800)$

Example: Display contrast value 1000 (factory setting at delivery)

| Byte | Transmission | Response | Description |
| :---: | :---: | :---: | :--- |
| 4 | xx | 03 | Transfer value (High-Byte - 00...0F) |
| 5 | xx | E8 | Transfer value (Low-Byte -00...FF) |

Contrast value = transfer value High-Byte x $256+$ transfer value Low-Byte (03 E8 = 1000)
*: applicable for EXDUL-371E only

### 8.9.20 D/A Conversion

## Example:

Enable a voltage of +7.5 V across AOUT00+ (terminal 11). For this the output voltage range of $0-10 \mathrm{~V}$ shall be used.
+7.5 V comply with $+7500000 \mu \mathrm{~V}$, which are to be partitioned to three bytes.
$7500000=7270 E 0_{\text {hex }}$ or
Byte 2: $7500000 / 65536=114$ remainder 28896
Byte 1: 28896 / 256 = 112 remainder 224
Byte 0: 224

| Byte | Transmission | Response | Descrption |
| :---: | :---: | :---: | :--- |
| 0 | 0 A | 0 A | Command code 1st Byte |
| 1 | 00 | 00 | Command code 2nd Byte |
| 2 | 00 | 00 | Command code 3rd Byte |
| 3 | 01 | 01 | Command code 4th Byte |
| 4 | 00 | 01 | AOUT00+ = 0, AOUT01+ = 1 |
| 5 | 00 | 00 | Range byte (0-10V) = 0 |
| 6 | xx | xx | Reserved |
| 7 | xx | xx | Reserved |
| 8 | 00 | 00 | Sign $(+=0,-=1)$ |
| 9 | 72 | 72 | Voltage value Byte 2 |
| 10 | 70 | 70 | Voltage value Byte 1 |
| 11 | $\mathrm{E0}$ | $\mathrm{E0}$ | Voltage value Byte 0 |
| $12 \ldots 19$ | xx | xx | Reserved |
| $20 \ldots 22$ |  |  | kept for error code / error detection |

| Output voltage range |  |
| :---: | :---: |
| Range byte | unipolar |
| 0 | $0-10 \mathrm{~V}$ |
| 1 | $0-5 \mathrm{~V}$ |
|  | bipolar |
| 2 | $+/-10 \mathrm{~V}$ |
| 3 | $+/-5 \mathrm{~V}$ |
| 4 | $+/-2.5 \mathrm{~V}$ |

### 8.9.21 A/D Conversion

## Example:

Measuring a voltage of +7.5 V across AIN03+ (terminal 4). An input voltage range of $0-10 \mathrm{~V}$ and a single-ended measuring (channel byte $=3$ ) as the measuring method shall be used. For other measuring methods please find the allocated values for single-ended measurements in table 5.1 in chapter 5.1 and for differential measurements in table 5.2 in chapter 5.2

You can calculate the measured voltage as follows:
Voltage $=$ Byte2 * $65536+$ Byte1 * 256 + Byte0

| Byte | Transmission | Response | Description |
| :---: | :---: | :---: | :--- |
| 0 | $0 A$ | $0 A$ | Command code 1st Byte |
| 1 | 00 | 00 | Command code 2nd Byte |
| 2 | 00 | 00 | Command code 3rd Byte |
| 3 | 03 | 03 | Command code 4th Byte |
| 4 | 03 | 03 | Channel byte |
| 5 | 00 | 00 | Range byte (0-10V) = 0 |
| 6 | xx | xx | Reserved |
| 7 | xx | xx | Reserved |
| 8 | xx | 00 | Sign (+ = 0, - = 1) |
| 9 | xx | 72 | Voltage value Byte 2 |
| 10 | xx | 70 | Voltage value Byte 1 |
| 11 | xx | $\mathrm{E0}$ | Voltage value Byte 0 |
| $12 \ldots 19$ | xx | xx | Reserved |
| $20 \ldots 22$ |  |  | kept for error code / error detection |

In this example the calculated voltage is:
Voltage $=72_{\text {hex }}^{*} 65536+70_{\text {hex }}^{*} 256+$ EOhex $=+7500000 \mu \mathrm{~V}$
(positive, as sign byte $=0$ )

| Input voltage range |  |
| :---: | :---: |
| Byte value | unipolar |
| 0 | $0-10 \mathrm{~V}$ |
| 1 | $0-5 \mathrm{~V}$ |
|  | bipolar |
| 2 | $+/-10 \mathrm{~V}$ |
| 3 | $+/-5 \mathrm{~V}$ |

### 8.9.22 Factory reset

Description: restores the basic status

| Byte | Transmission | Response | Description |
| :---: | :---: | :---: | :--- |
| 0 | OC | OC | Command code 1st Byte |
| 1 | 00 | 00 | Command code 2nd Byte |
| 2 | OC | 0C | Command code 3rd Byte |
| 3 | OF | 0F | Command code 4th Byte |
| $4 \ldots 19$ |  |  | reserved, without relevance for this command |
| $20 \ldots 22$ |  |  | kept for error code / error detection |

## 9. Specifications

## A/D inputs

8 inputs single-ended (se)
or 4 inputs differential (diff)
or combined se/diff selectable via software
Resolution: 12 bit
Input voltage range:
unipolar: $0 . .5$ Volt, $0 . .10$ Volt
bipolar: +/-5 Volt, +/-10 Volt
Absolute Accuracy: typ 0.1 \% +/- 1 LSB
Input resistor: unipolar $42 \mathrm{k} \Omega$
bipolar $31 \mathrm{k} \Omega$
Over voltage protection: 20 V
Measuring cycle: max. 1 ms

## DIA outputs

## 2 outputs

Resolution: 12 bit
AA: typ $0.1 \%+/-1$ LSB
Output voltage range
unipolar: $0 . .5$ Volt, $0 . .10$ Volt
bipolar: +/-2.5 Volt, +/-5 Volt, +/-10 Volt
Output current: max +/-5 mA

## Optocoupler inputs

3 channels galvanically isolated
1 of the channels progammable as a counter input
Optocoupler with integrated schmitt trigger function
Over voltage protection diodes
Input voltage range
high $=10 . .30$ Volt
low $=0 . .3$ Volt
Input frequency: max. 10 kHz

## Optocoupler outputs

2 channels, galvanically isolated
High capacity optocoupler
Reverse polarity protection
Output current: max. 150 mA
Switching voltage: max. 50 V

## Counter

1 programmable digital 16-bit counter (allocated to the first optocoupler input) counting frequency: max. 5 kHz

## LCD Display

Matrix display with 2 lines and 16 columns displaying 16 characters each line
Programmable to display user specific data or I/O status
Operating voltage
+18 V...+36 V (external power supply)

## USB Interface

Compatible with USB 2.0
USB Connection Plug and Play (hot-pluggable, connectable at operating system)

## Connection Terminals

1 * 24pin screw terminal block
1 * USB socket Type B
USB connection lines
1 * USB plug Type A
1 * USB plug Type B

## Dimensions

$105 \mathrm{~mm} \times 89 \mathrm{~mm} \times 59 \mathrm{~mm}(\mathrm{l} \times \mathrm{b} \times \mathrm{h})$

## Casing

Insulating plastic casing with integrated snap-on technology for DIN EN rail mounting. Suitable for control and engineering technology mounted to control and distribution boxes, surface mounting or mobile use on a desk.

## 10. Circuitry Examples

### 10.1 Wiring of the Optocoupler Inputs

## 12. Product Liability Act

## Information for Product Liability

The Product Liability Act (Act on Liability for Defective Products - ProdHaftG) in Germany regulates the manufacturer's liability for damages caused by defective products.

The obligation to pay compensation can be given, if the product's presentation could cause a misconception of safety to a non-commercial enduser and also if the end-user is expected not to observe the necessary safety instructions handling this product.

It must therefore always be reviewable, that the end-user was made familiar with the safety rules.

In the interest of safety, please always advise your non-commercial customer of the following safety instructions:

## Safety instructions

The valid VDE-instructions must be observed, when handling products that come in contact with electrical voltage.

Especially the following instructions must be observed: VDE100; VDE0550/0551; VDE0700; VDE0711; VDE0860.
The instructions are available from:
vde-Verlag GmbH
Bismarckstr. 33
10625 Berlin

* unplug the power cord before you open the unit or make sure, there is no current to/in the unit.
* You only may start up any components, boards or equipment, if they are installed inside a secure touch-protected casing before. During installation there must be no current to the equipment.
* Make sure that the device is disconnected from the power supply before using any tools on any components, boards or equipment. Any electric charges saved in components in the device are to be discharged prior.
* Voltaged cables or wires, which are connected with the unit, the components or the boards, must be tested for insulation defects or breaks. In case of any defect the device must be immediately taken out of operation until the defective cables are replaced.
* When using components or boards you must strictly comply with the characteristic data for electrical values shown in the corresponding description.
* As a non-commercial end-user, if it is not clear whether the electrical characteristic data given in the provided description are valid for a component you must consult a specialist.

Apart from that, the compliance with building regulations and safety instructions of all kinds (VDE, TÜV, professional associations, industrial injuries corporation, etc.) is duty of the user/customer.

## 13. CE Declaration of Conformity

This is to certify, that the products

## EXDUL-371E EDV number A-381715 <br> EXDUL-371S EDV number A-381710

comply with the requirements of the EC directives. This declaration will lose its validity, if the instructions given in this manual for the intended use of the products are not fully complied with.

EN 5502 Class B
IEC 801-2
IEC 801-3
IEC 801-4
EN 50082-1
EN 60555-2
EN 60555-3
The following manufacturer is responsible for this declaration:

> Messcomp Datentechnik GmbH
> Neudecker Str. 11
> 83512 Wasserburg
given by
Dipl.Ing.(FH) Hans Schnellhammer

Wasserburg, 25.11.2013

## Reference system for intended use

The multi functional modules EXDUL-371E and EXDUL-371S are not stand-alone devices. The CE-conformity only can be assessed when using additional computer components simultaneously. Thus the CE conformity only can be confirmed when using the following reference system for the intended use of the multi functional modules:

| Control Cabinet: | Vero IMRAK 3400 | $804-530061 \mathrm{C}$ <br> $802-563424 \mathrm{~J}$ <br> 802-561589J |
| :--- | :--- | :--- |
| 19" Casing: | Vero PC-Casing | $145-010108 \mathrm{~L}$ |
| 19" Casing: | Additional Electronic | $519-112111 \mathrm{C}$ |
| Motherboard: | GA-586HX | PIV 1.55 |
| Floppy-Controller: | on Motherboard |  |
| Floppy: | TEAC | FD-235HF |
| Grafic Card: | Advantech | PCA-6443 |
| Interface: | EXDUL-371E | A-381715 |
|  | EXDUL-371S | A-381710 |
